

CONSTANT GERM PROTECTION 24/7/365 > PROFESSIONAL APPLICATION

Germ and Bacteria are Everywhere

FACT: The CDC reports that 80% of all cross contamination comes from biofilm that is common on human touchpoints while absenteeism costs employers \$1,685 per employee per year. Standard disinfecting protocols are only effective during application

Until Now

Introducing the MicroShield 360 System

EPA registered as a final “bio-static” surface finish that provides a long lasting, colorless, odorless, hypoallergenic coating on the substrate to which its applied. It’s effective against bacteria, mold, mildew, fungus, and even some viruses including Norovirus, H1N1, Influenza and Strep.

MicroShield 360 is 99.99% Effective Against Illness Causing Organisms

Eliminate expensive cleaning and disinfecting chemicals that must be routinely applied to kill germs and bacteria. Our unique proactive approach is guaranteed for 1 year with just 1 single application. Clean the surface with nothing more than water going forward.

How is that possible? Unlike traditional chemicals our solution is non-sacrificial and provides a cohesive bond 40x the pull of gravity allowing it to maintain its integrity. While other chemicals attack germs our solution acts as a layer of microscopic swords piercing the cells wall and introducing an electrical shock which kills the cell.

What is the MicroShield 360 Process?

1. Surfaces are cleaned prior to disinfection
2. MicroShield Renew disinfectant is applied with an electrostatic sprayer
3. MicroShield 360 antimicrobial permanent coating is applied using an electrostatic sprayer providing protection 24/7
4. We work with your team to promote awareness internally/externally

MicroShield 360 can be applied for cents per square foot.

Applications:

- Residential Homes
- Fitness Centers
- Schools / Universities
- Child Care
- Senior Care
- Offices
- Medical Facilities
- Construction
- Hospitality
- Transportation
- Amongst Others...
